Your Introduction to the London Prosthetics Centre

At the London Prosthetics Centre your care is more than just a service - it's a commitment. Since our conception in 2008, LPC has been dedicated to providing the very best in prosthetic intervention, placing you - our client - at the heart of everything we do. We provide compassionate, inclusive, and personalised care to empower you to achieve your goals.

Caring for you

Our prosthetists collaborate seamlessly with physiotherapists, occupational therapists, personal trainers, and technicians, ensuring a holistic approach to your treatment. Paired with a portfolio of world-renowned prosthetic manufacturers, we deliver the highest standard of care, utilising the latest technology to ensure optimal outcomes.

Backed by global expertise

With a mission *"to offset disability throughout the world, to build an inclusive society whilst protecting and preserving the environment"* our parent company, Eqwal, embodies our shared values of care, collaboration and client focus. Eqwal continues to grow around the world, now employing over 3,000 dedicated team members, and building a strong portfolio of leading brands in the industry such as Steeper and TASKA. Together our mission is clear: to care for you, to care for all.

Reflecting you in everything we do

Every aspect of our updated logo was intentionally designed with you in mind.

Human anatomy serves as the foundation of our icon, with each symbol representing a joint such as an elbow or knee.

Some verticals may be missing in different parts of the text, yet the logo appears complete; something many of our clients can relate to.

Utilising the traditional cross symbol associated with healthcare, the focal point of the icon is the centre; as are you in all our dealings and the pop out on the previous page.

We are united with other industry leaders under the Eqwal Group, each displaying this simple tagline alongside our logos.

Charlotte Swift, Lower Limb Amputee

The team at the London Prosthetics Centre made me think about my aims and challenges and helped me achieve my goals. They have enabled me to believe that anything is achievable."

"Having a sense of direction and speaking to someone that had been through it, really helped to build my confidence. To anyone in a similar position as me, please remember: There is life after limb loss."

Mukhtar Adam, Lower Limb Amputee

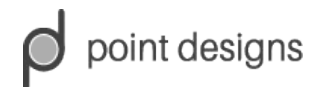

As an independent provider of advanced world-leading prosthetics, your bespoke limb will be tailored to your needs and goals, and *your needs and goals only*.

With a specialist LPC Clinician by your side, you'll have access to a wide range of cutting-edge prosthetic products from a portfolio of world-renowned manufacturers. Our team continuously evaluate the latest prosthetic technologies and identify which features will benefit you the most. So you can rest assured in the knowledge that your bespoke limb is made of the highest quality, state-of-the-art components.

While a professional recommendation is vital to the success of your care, at the London Prosthetics Centre, we believe your voice deserves to be heard when it comes to the selection of your prosthesis. Often it takes time

for an amputee to really understand the benefits of a new limb. For these reasons, we offer our clients the ability to trial different devices before committing to them - such as microprocessor knees and feet, bionic hands, or specific activity prostheses. Trials typically last two weeks, giving you the opportunity to use your new limb in your own environment.

In addition to trialling the components for your own subjective opinion, our fully integrated multidisciplinary team will provide objective assessments and outcome measures highlighting any differences in your performance with your new device.

Collaborating with world-renowned manufacturers

Your tailored rehabilitation programme will consist of a range of therapies

Occupational Therapy

Occupational Therapy is an important source of support following amputations. Helping you to restore an optimal level of independence by teaching new techniques and strategies for areas such as personal care and hygiene, meal preparation, using public transport, and accessing community facilities. Most importantly, it is about supporting you to reach your personal functional goals.

Our occupational therapists can also offer expert advice on large items of equipment such as wheelchairs, home modifications, returning to work, and advice about vehicles and adapted driving options.

Physiotherapy

Physiotherapy helps restore movement and function whilst improving flexibility and strength as the body recovers. Sessions will often include putting together a programme of daily exercises to relieve pain and stiffness in joints, ultimately encouraging better movement of the body. Education and advice to improve posture and technique will be covered, and we will continually assess your goals and progression.

Physiotherapists will often be the one to help you use your new prosthesis, assisting in techniques for a comfortable walking gait, and building up the amount of time using a device.

Personal Trainer

Our team of personal trainers develop individual exercise prescription plans for optimum strength and flexibility. Implementing a daily fitness routine will improve your coordination, balance, stamina and agility. Building up the muscle strength in your legs, arms and trunk will help you endure the demands of everyday life, as they play a vital role in how you stand and move.

Setting goals and providing feedback and accountability for your end results will be the motivator behind the sessions, with the aim to not only make you physically fit but to reduce stress and improve overall well-being.

Musculoskeletal Therapy

The musculoskeletal system is made up of our muscles, bones, tendons, ligaments, joints and tissue which work together to move the body and assist with posture. Limb loss often creates a strain on the remaining system, therefore increasing the chance of developing early arthritis and back pain.

Our musculoskeletal treatments include the mobilisation of the joints, acupuncture or soft tissue release therapy, to help alleviate soft tissue discomfort associated with occupational stresses, muscular over-use and many chronic pain conditions.

Psychotherapy and Well-being Support

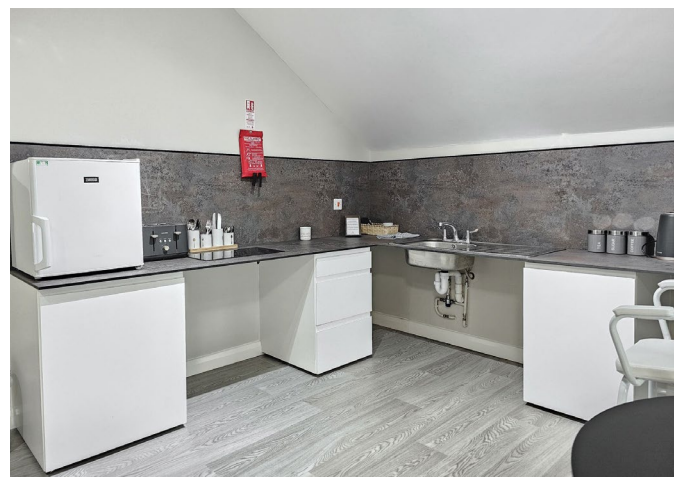

Mental well-being support is a key component of our holistic rehabilitation program, helping you manage the emotional challenges of limb loss. Delivered by trusted professionals, sessions are private, confidential, and held in a comfortable environment.

These tailored sessions empower you to process your experiences, build resilience, and regain confidence, ensuring your mental health is supported alongside physical recovery. By addressing anxiety, depression, and emotional adjustment, psychotherapy plays a vital role in fostering long-term independence and well-being.

Residential Rehabilitation

Our treatment partners offer a comprehensive residential rehab programme all from one purpose-built facility designed to meet the diverse needs of amputees. You will benefit from a coordinated schedule delivered by a highly qualified, HCPC and DBS compliant team.

During your stay, you'll have access to a private dwelling for the duration of your 8-12 week programme, or longer if needed - this will depend entirely on your needs as an individual and the rate of progress towards your goals. Friends and family are more than welcome to visit you here to provide additional physical and mental support. Residential rehab is ideal for those with complex needs, limited home support, or those requiring intensive care.

Constantly arranging transport can become a stressful exercise if you're concerned about asking friends and family to take time out of work, or you're worried about the cost of regular private and public transport methods, this is no longer a concern when you stay with one of our Residential Rehab partners in their homely settings - you're already there! This structure ensures continuity of care in a controlled, safe environment where therapists, personal trainers and mental health professionals work closely together, often in real-time, to adjust and align treatment plans.

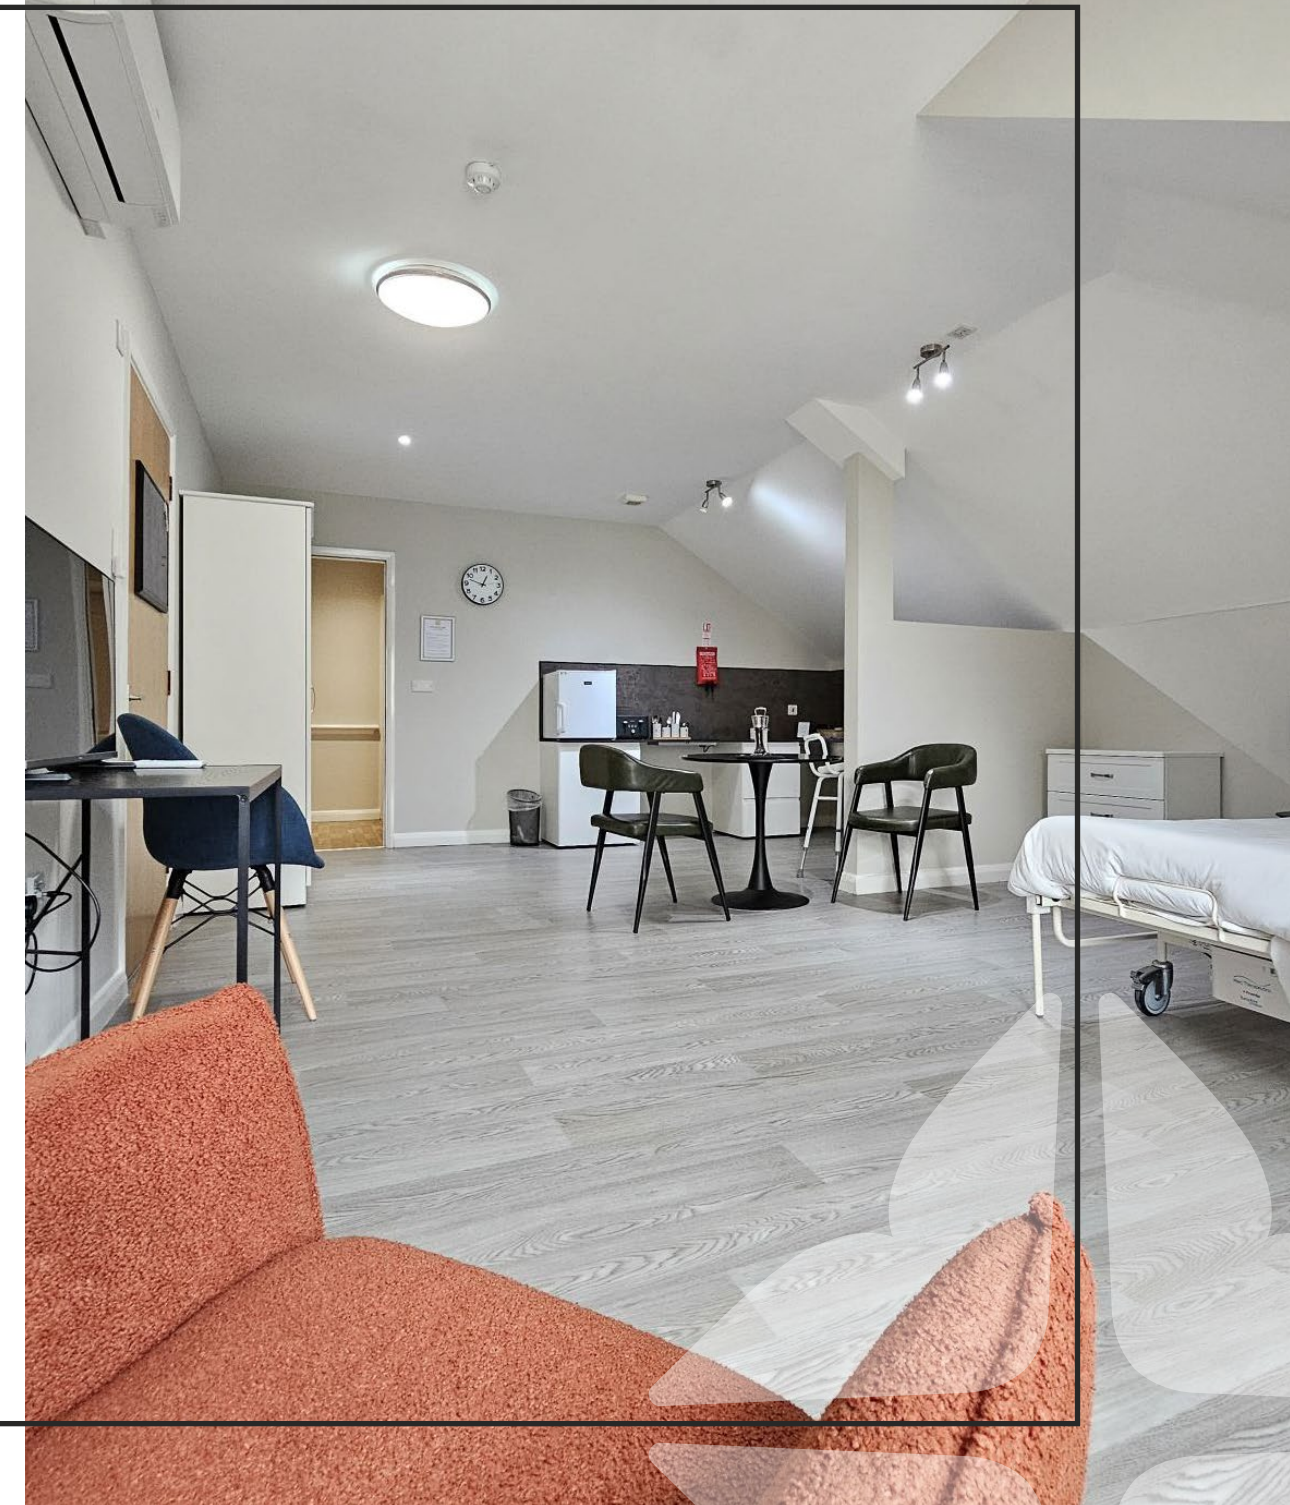

This home will become your home; a comfortable space familiar to you where you have the freedom to make mistakes and learn with the support of a

trusted team of specialists as you work to regain your independence.

Once you are confident in your mental and physical abilities again and you're ready to leave the facility, you'll easily be able to transfer your skills for use at home, because the purpose-built rooms are designed to replicate life at home. Throughout the rehab process, your prosthetist remains actively engaged, providing essential adjustments, repairs, or replacements as needed to maintain your progress. This continuity strengthens the relationship, ensuring you have ongoing support from a team you know and trust as you move forward.

Services provided in collaboration with

In-Clinic Rehabilitation

Our in-clinic rehabilitation programme brings all essential therapies together under one roof, minimising the strain of coordinating multiple appointments. Using your new limb for the first time can be a nerve-racking experience, but there are no long walks or commutes via public transport to get to a suitable training facility, simply make your way down the corridor to our purpose-built rehabilitation studio featuring dedicated training areas equipped with cardio machines, balance equipment, free weights and more. Here, your personal trainer will work with you to adjust to your prosthesis and push your body to new limits to help you get back to pre-injury levels of mobility and independence.

While taking a break in between reps, you can also get a peek behind the scenes at our talented silicone technicians in action. Our High Definition Custom Silicone Clinic is located below the rehabilitation studio offering you a unique perspective on the background of your prosthetic care.

The close collaboration between your on-site team of prosthetists, technicians and the rehabilitation specialists at LPC means you have immediate access to adjustments, repairs, or replacements to keep you progressing. As you develop confidence and independence, our physiotherapists extend rehabilitation beyond

the clinic's walls. They can accompany you on real-world outings such as grocery shopping, visiting the gym, playing golf, or swimming at the local pool, leaving you feeling empowered as you integrate back into society as an independent individual.

While you could be working up a sweat in the gym one day, you may be strengthening your mental well-being with a psychotherapist the next, because if your mental health isn't supported in equal measure, other aspects of your rehabilitation may not be as effective. Your rehabilitation schedule is completely bespoke to you and your needs.

High Definition Silicone

The Steeper Silicone Clinic are proud to manufacture some of the highest quality cosmesis available from anywhere in the world - our comprehensive range of custom silicone products are designed bespoke to individual requirements and are sculpted in-house at our silicone clinic in the UK.

Custom high-definition silicone covers are premium cosmeses resulting in a life-like prosthesis, blended and defined to match the user's sound limb. Often, silicone cosmesis are the answer for many amputees as they

offer enhanced realism and a more life-like appearance. We can create individual digits, partial hands, partial feet, upper and lower limb covers as well as cosmetic restorations for burns and tissue loss. For a hyper-realistic touch, all our finger and toe nails are crafted using firm silicone or acrylic and use as many colours as is necessary for a match.

Each silicone prosthesis can be tailored to the user's exact requirements, from tattoos to painted nails, veins to surface hair and everything else in between, the possibilities

are limitless! Not only are all our products cosmetically tailored to suit the user but vitally, we always ensure the solutions we create are comfortable and functional, providing users with a natural and realistic looking prosthesis that suits their lifestyle.

Using our exclusive Spectromatch™ skin colour matching technology, we can access up to 22,000 colours to closely match your skin tone.

Reports for every point in your prosthetic journey

- Expert Witness Reports
- Single Joint Expert
- Quantum Reports
- Clinical Negligence
- Personal Injury
- Standard Prosthetic Reports
- Physiotherapy Reports
- Upper Limb Occupational Therapy Reports
- Joint Prosthetic and Physiotherapy Immediate Needs Report
- Instructions taken by Claimants and/or Defendants

Expert Witness and Legal Reports

Not only are all our experts state-registered clinicians, but they're also highly regarded in their field. They have attended numerous Bond Solon courses and are Cardiff University Law School Expert Witness (CUBS) Certified.

All reports intended for court use comply with the requirements of the Civil Procedure Rules Part 35. Whilst always responding to instructions, reports will typically include:

- Examination findings
- Independent expert opinion on the prescription of prostheses or orthoses
- Breakdown of costs to support calculations on quantum
- Images and explanations to assist in understanding terminology
- We will also provide a second opinion on previously commissioned reports within our field of expertise

Rehabilitation Reports

While these reports are not intended for use by the courts, we work alongside case managers to identify and cost the client's needs in the short term. This can then be used to quickly establish a rehabilitation programme suitable to the individual client, no matter where they are located in the United Kingdom.

Meet Your Team

Prosthetists

Your prosthetist will be with you every step of the way throughout your prosthetic journey to achieve your independence goals.

Prosthetic Technicians

The team working hard behind the scenes to craft you the perfect prosthetic limb build.

Silicone Technicians

Our talented silicone artists hand craft hyper realistic silicone cosmeses for upper and lower limb amputees.
